Title: Performance characterization of reversed 10-stage Tesla micromixer in microfluidic fluid mixing

Journal: European Journal of Mechanics / B Fluids

Dear Dr. Tamrin,

Thank you for submitting your manuscript to the European Journal of Mechanics B/Fluids. Before consulting any reviewers, the handling editor reads every submitted paper attentively in order to check whether it fits in the general scope of the journal and whether it meets the quality criteria that we apply.

Although your paper addresses an interesting topic, I believe it does not fit in the scope of EJMB. The main reason is that your paper addresses a rather standard problem that is solved with a rather standard method. Although the results may be of interest for a certain group of specialists, their generic value is limited.

For this reason the paper is of less interest for the general readership of our journal. I suggest that you submit your paper to a journal that is specialized in engineering problems, because then you would reach the readers you are aiming at.

Kind regards,

Frederic Dias
Editor-in-Chief
European Journal of Mechanics / B Fluids
